SUMMARY

A software engineer focused on building data-driven systems by combining software development, data engineering, and business process understanding. I design and develop solutions that structure, transform, and leverage data to support operational decision-making and scalable architectures. Currently working on strengthening my expertise in data pipelines, Business Intelligence, and data warehousing, while integrating cloud technologies to support scalable and reliable infrastructure. My work aligns with the ongoing shift toward integrated digital ecosystems, where data, processes, and systems must operate seamlessly. I aim to contribute to enterprise environments by improving data flows, system efficiency, and infrastructure readiness for large-scale digital transformation initiatives.

Education

Future Skills Academy

Apr 2026 - Present

Certification in Data Engineering

Currently enrolling in a Data Engineering learning path focused on Python, SQL, and modern data tools. Developing skills in ETL pipelines, relational and NoSQL databases, and data processing using technologies such as Apache Spark and Airflow. Building a foundation in data modeling, data warehousing, and distributed data systems.

IT Comp

Dec 2025 - May 2026

Certification & Trainings, Business Intelligence

I am participating in a Power BI training program focused on business intelligence and data visualization. The training covered key concepts such as data modeling, dashboard creation, interactive reporting, and data analysis techniques. Through this training, I am strengthening my ability to transform raw data into meaningful insights and develop interactive dashboards to support data-driven decision-making.

Sonatrach Management Academy

Nov 2025 - Nov 2025

Training

A short training session was provided by SMA to all employees across all its fields including my company, in preparation for the implementation of SAP S/4HANA. The training was highly productive for me, as it introduced key concepts of ABAP development in SAP. The session was delivered by Mr. Mekhaledi Ilyes, a certified trainer at SMA.

Cisco Networking Academy

Aug 2024 - Aug 2024

Certification & Trainings

Applied stakeholder engagement techniques (Cisco - Engaging Stakeholders for Success) to collaborate effectively with cross-functional teams, aligning technical solutions with business and operational needs.

UNIVERSITÉ Amar Telidji de Laghouat

Sep 2019 - Jul 2021

Masters of Computer and Information Sciences, Management Information Systems

Master's degree, Computer Systems Networking and Distributed Systems (September 2019 - July 2021)

UNIVERSITÉ Amar Telidji de Laghouat

Sep 2016 - Jul 2019

Bachelor's Degree of Computer Science, Computer and Information Science

Bachelor's degree, Computer Science · (September 2016 - July 2019)

Experience

Entreprise Nationale de Canalisations Aug 2024 - Present

Software Engineer

Supporting and operating the company’s digital infrastructure, ensuring system stability, performance, and continuity across core applications. Actively involved in maintaining and optimizing data flows, supporting system operations, and aligning infrastructure with enterprise requirements to enable a smooth transition toward an enterprise-grade ERP environment. Contributing to the preparation phase of the upcoming SAP S/4HANA transformation by improving data readiness, system integration, and scalable architecture.

Barbaros Events Feb 2024 - Nov 2024

Assistant Event Planner

Event planning, and client communications Timeline creation, and resource allocation. This role enhanced soft skills in teamwork, client management, and problem- solving in a fast-paced environment.

Barbaros Events Jul 2022 - Feb 2024

Assistant Manager

I was inspired by BARBAROS Team, because of their sincerity and the warm environment they’re providing. Supported the planning & execution of corporate and international events in Istanbul. Coordinated logistics, vendors, and on-site operations with a team of 10+. Delivered high-quality client experiences with communication skills.

Projects

Enterprise Electronic Document Management System (EDMS) Jan 2026 - Present

Within a team we designed and developed an Enterprise Electronic Document Management System (EDMS/GED) to centralize document handling across all organizational structures.

Implemented a unified platform for document creation, storage, indexing, and archiving.

Enabled secure document sharing between departments with controlled access and role-based permissions.

Working on making this EDMS document traceability, version control, and auditability across multiple structures.

Aiming to reduced dependency on paper-based workflows and improved information retrieval efficiency.

Digitalization of Performance Bond Management Process Jun 2025 - Present

Developed a desktop application using .NET WinForms to digitalize the Performance Bond Management process.

Implemented a validation, approval, and tracking workflow across multiple internal departments.

Reduced document processing and circulation time from approximately 15 days to 4 days by optimizing signature and approval workflows.

Enhanced traceability, transparency, and monitoring of performance bond operations.

Improved operational efficiency through process automation and centralized document management.

Production Workshop Management Platform (Mini ERP) - Freelance Mar 2025 - Present

Developed a multi-user production management platform using Flutter and a modular architecture. Designed a structured data management system for order tracking, task assignment, workflow management, and reporting dashboards. Implemented Role-Based Access Control (RBAC) and integrated backend services through REST APIs to ensure data consistency and synchronization. Optimized operational workflows, increasing monthly processing capacity from approximately 49 orders to over 165 orders. Reduced operational bottlenecks and improved production visibility through centralized management and reporting.

Project Simulation & Cost Estimation Application (ENAC Commercial Department)

Oct 2024 - Present

Designed and developed an internal web application for estimating project requirements, including workforce, equipment, and consumables based on project parameters and execution zones. Built detailed estimation reporting capabilities with Excel export functionality for business analysis and decision-making. Integrated a cost calculation engine covering labor, equipment, and consumable expenses. Enabled more accurate project planning, budgeting, and resource allocation. Streamlined estimation processes and improved decision-making efficiency for commercial teams.

MIZA Com Multi-Service Delivery Platform

Apr 2021 - Jul 2024

Co-founded and developed a multi-service delivery platform serving 15,000+ users across Food, Market, Grocery, Shopping, and Delivery services. Designed and implemented the backend architecture on Google Cloud Platform (GCP) with a focus on scalability, performance, and high availability. Optimized order management and delivery workflows to improve operational efficiency and service reliability. Contributed to the development of a centralized mobile platform aimed at modernizing and unifying local delivery services. Led the technical strategy and platform evolution as Founder while managing product development and operations.

Skills

SQL Database, NoSQL Databases, Data Pipelines, Data Warehousing, Data Modeling, Data Analysis, Business Intelligence, Google Cloud Platform, Digital Infrastructure, System Operation, Data Flow, .NET Application Development, Back End Development, Rest API Integration, Software Design, Workflow Management Systems, Business Process Modeling, Business Requirements Gathering, Process Optimization, Stakeholder Management, Collaborative Teamwork, User Adoption, Git, Workflow, Cloud Infrastructure Services, GitLab, SQL
